

The top of the page features a large background image. On the left, there are three small square inset images: the first shows a blue textured surface with dark spots, the second shows a black and white circular pattern, and the third shows a fiery orange and yellow texture. The main background image shows two workers in red shirts and yellow hard hats, one of whom is holding a large roll of material. The text 'CABLOFIL' is prominently displayed in white on a dark background, with 'INNOVATORS IN CABLE MANAGEMENT' written below it in a smaller font. The overall scene is set against a backdrop of glowing fiber optic cables.

CABLOFIL PROVIDES QUICK AND EASY REFERENCE WITH NEW TECHNICAL GUIDE

Cablofil has published a new 'Technical Guide', providing specifiers and contractors with all the information they need about the system in one downloadable document.

Designed as a one-stop-shop easy reference manual, the new Technical Guide summarises the electrical applications for which the Cablofil system is commonly used. It talks users through load bearing, safety, coupling and supports for the system, highlighting test results where appropriate, and advises on the different metals and surface treatments available within the Cablofil range, offering guidance on selecting the most appropriate product for different environments.

The guide goes on to provide specialist information for specific applications, including the food industry, data cabling, fibre optic cabling and copper data cabling. It also provides essential best practice and safety information, including sections on electromagnetic compatibility, electrical continuity, fire resistance and fire protection, outlining independent test data and summarising the facts in a quick-to-read, digestible format. Finally, the guide concludes by providing help with specifying and designing Cablofil installations, signposting users to the proprietary tools, (Cablosoft, Cablocad and e-catalogue) that the company has devised to help customers identify a solution, design an installation and gain help with technical specifications.

Copies of the new Cablofil Technical Guide are available to download from the company's website: www.cablofil.co.uk or by contacting the company's customer care team on telephone 0845 1304 628.
